

As the leader in Pathology Informatics for the last 20 years, the Department of Pathology at UPMC in Pittsburgh is one of the first groups of specialists to offer diagnostic consultations online.

The UPMC Digital Pathology Consultation Portal utilizes Whole Slide Image (WSI) technology and accepts various forms of digital images and files, including glass slides and images from most digital cameras. Rather than taking the time to send samples to Pittsburgh, our team of sub-specialty experts are well-equipped to receive, review and offer a diagnosis, all online - saving time for you and your patients.

We now begin offering the option to upload digital images captures from a microscope with smartphones. These images can be uploaded to our server directly from the smartphone by using the mobile version of the UPMC Digital Pathology Consultation portal, at

<https://pathconsult.upmc.com>

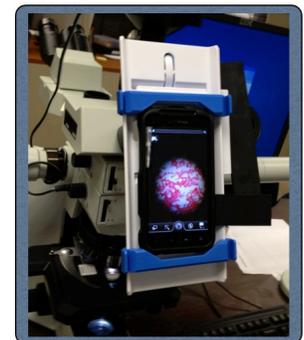

Benefits of using the mobile online portal:

Access to experts: Your submission will be handled by a team of Anatomic Pathologists who are physicians at UPMC and faculty at the University of Pittsburgh.

Efficient diagnosis: You will have a response within 24 hours of receipt of images, including a comprehensive surgical pathology report.

Security: Reports are generated dynamically so no patient data is stored on the web server.

Technologically flexible: Digital images and video taken with a variety of smartphones (iOS or Android - based) from the microscope by using a special adapter, or even without adapter can be easily uploaded directly to our secure server.

Economical: Inexpensive cost structure setup based on images and other rates and fees can be established for high-volume partners.

For technical information please consult the following user guide

Part I: Access the UPMC Digital Pathology Consultation Services at pathconsult.upmc.com to register for an user account

Step 1:

Access the UPMC Digital Pathology Consultation Services webpage at: pathconsult.upmc.com and register for a new user account
